Abstracts

The global Hyperimmune Globulins market size is expected to reach \$ 3348 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Hyperimmune globulin is similar to intravenous immunoglobulin (IVIG) except that it is prepared from the plasma of donors with high titers of antibody against a specific organism or antigen. Some agents against which hyperimmune globulins are available include hepatitis B, rabies, tetanus toxin, varicella-zoster, etc. Administration of hyperimmune globulin provides 'passive' immunity to the patient against an agent. This is in contrast to vaccines that provide 'active' immunity. However, vaccines take much longer to achieve that purpose while hyperimmune globulin provides instant 'passive' short-lived immunity. Hyperimmune globulin may have serious side effects, thus usage is taken very seriously. Hyperimmune globulin is prepared from the plasma of donors with high titers of antibody against a specific organism or antigen. Hyperimmune globulin may have serious side effects, thus usage is taken very seriously.

Global Hyperimmune Globulins key players include CSL Behring, Grifols, etc. Global top two manufacturers hold a share over 50%. Asia-Pacific is the largest market, with a share about 30%, followed by Europe and North America, both have a share over 50 percent. In terms of product, Rho(D) Immunoglobulins is the largest segment, with a share about 33%. And in terms of application, the largest application is Government Institution, followed by Private Sector, etc.

The hyperimmune globulin market is primarily driven by the increasing prevalence of

infectious diseases and the rising demand for immunoglobulin therapies. These therapies are crucial in treating immunodeficiency disorders and providing passive immunity against various pathogens, which fuels market growth. Additionally, advancements in plasma-derived therapies and increasing government initiatives for immunization programs contribute to market expansion.

However, the market faces significant challenges, such as the high cost of treatment and limited availability of plasma, which is a critical raw material for hyperimmune globulin production. Moreover, stringent regulatory requirements for product approval and potential side effects associated with immunoglobulin therapies can hinder market growth.

This report studies the global Hyperimmune Globulins production, demand, key manufacturers, and key regions.
