Abstracts

Hyperloop is a conceptual high-speed, intercity surface transportation system, which uses pod or capsule-like vehicle operating in a sealed vacuum tube with reduced pressure. Its average travelling speed is expected to be 600 mph with a maximum speed of 760 mph, which is faster than the alternative modes of transportation such as air, water, road, and rail. It comprises a sealed tube through which a pod or capsule travels free of air resistance or friction, conveying passenger and freight at high speed.
