Abstracts

According to our (Global Info Research) latest study, the global Hyperphosphatemia Drugs market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Phosphorus is an important element for normal physiologic functions such as bone construction, nerve function, and muscle contraction. About 85% of phosphorus is stored in the bones and different tissues in the body. The excess phosphorus is eliminated from the body by the urinary system. The normal phosphate level in the blood is 3-4 mg/dL. Electrolytic disturbance resulting in high levels of phosphate in the blood causes hyperphosphatemia. Individuals with chronic kidney diseases have a decreased glomerular filtration rate and increased serum phosphate levels. The high phosphate levels in the serum lower calcium levels because of phosphate precipitation by calcium ions, leading to calcification of vascular tissues and heart diseases. Aluminum-, calcium-, magnesium-, and iron-based and aluminum-free, calcium-free phosphate binders are used to treat the condition.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high

costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
