## Abstracts

The global Hyperthermic Perfusion System market size is expected to reach \$ 64.33 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

A Hyperthermic Perfusion System, also known as hyperthermic chemotherapy delivery system, is a medical device designed to administer chemotherapy drugs at an elevated temperature directly to a specific area of the body. This treatment approach is used in various medical contexts, including hyperthermic intraperitoneal chemotherapy (HIPEC) and hyperthermic limb perfusion (HILP), to enhance the effectiveness of chemotherapy in treating cancer. Temperature Control Unit is responsible for heating and maintaining the chemotherapy solution at a precise and elevated temperature. In HIPEC, for example, the temperature is typically maintained in the range of 41-43 degrees Celsius (105-109 degrees Fahrenheit). The controlled hyperthermia is an essential aspect of the treatment's effectiveness. Hyperthermic Perfusion Systems are used in highly specialized medical procedures and are typically operated by trained medical professionals, including surgeons and anesthesia providers. The price of the main unit for Hyperthermic Perfusion System typically ranges from approximately US\$70,000 to US\$150,000 per unit.

The upstream supply chain for Hyperthermic Perfusion System mainly includes medical-grade pumps, heat exchangers, temperature sensors, pressure monitoring components, control systems, tubing sets, reservoirs, filters, sterile disposable kits, and biocompatible materials that meet medical device standards. Key manufacturing capabilities are concentrated in fluid temperature control, stable perfusion flow, real-time monitoring, sterility assurance, and system safety design. Downstream demand mainly comes from hospitals, cancer centers, surgical oncology departments, and specialized HIPEC

treatment centers, where the equipment is used during cytoreductive surgery to circulate heated chemotherapy solution within the abdominal cavity. Market demand is closely linked to the clinical adoption of HIPEC procedures, hospital investment in oncology surgery capabilities, availability of trained surgical teams, and the recurring use of disposable procedure kits for each treatment.
