Abstracts

The global Hypochlorous Acid market size is expected to reach \$ 5735 million by 2032, rising at a market growth of 3.6% CAGR during the forecast period (2026-2032).

Hypochlorous acid is a weak acid that can only exist in solution, because it is highly unstable when isolated in a pure form. There are a number of uses for this chemical, most of which take advantage of its strong oxidating properties, which allow it to be used as a bleach and disinfectant, among many other things. Many manufacturers produce this acid for sale to both industrial users and ordinary consumers, and many stores carry it, typically in the household cleaning section. Though it can be safely used when diluted, it can be very dangerous when concentrated.

While this compound can be very useful in many applications, including household laundry, cleaning, and sterilization of clinical environments, it can also be dangerous in certain settings. It is toxic to people and animals, and should not be ingested. It can also cause skin irritation and damage to the eyes, and people should use caution or wear protection when working with it to avoid splashbacks.

Since hypochlorite acid is not stable, we count the hypochlorite salt with ClO^- , especially Sodium Hypochlorite and Calcium Hypochlorite. The quantity of hypochlorite acid is converted from the quantity of salt basing on its ClO^- content. The sodium hypochlorite in the market is 12.5% solution.

Due to the very high transportation costs, in most markets, the market share is mainly occupied by local chlor-alkali manufacturers. In terms of global revenue, Olin Chlor Alkali, Lonza, Inovyn, Axiall, AGC Chemicals, Chongqing Tianyuan and Nouryon are the main players in the global market, with about 15% market shares.
