According to our (Global Info Research) latest study, the global Hysteroscopic Planing System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The hysteroscopic planing system is a hysteroscopic tissue resection system based on the principle of mechanical rotary cutting. The blade rotates at high speed in the device, with high cutting efficiency, and can perform tissue resection and tissue suction at the same time. Compared with the traditional hysteroscopic resection, it minimizes the secondary damage to the endometrium, shortens the operation time, and has a clear surgical field of view.
