The global Hysteroscopic Planing System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The hysteroscopic planing system is a hysteroscopic tissue resection system based on the principle of mechanical rotary cutting. The blade rotates at high speed in the device, with high cutting efficiency, and can perform tissue resection and tissue suction at the same time. Compared with the traditional hysteroscopic resection, it minimizes the secondary damage to the endometrium, shortens the operation time, and has a clear surgical field of view.

This report studies the global Hysteroscopic Planing System production, demand, key manufacturers, and key regions.
