## Abstracts

The global Ibrexafungerp Citrate Tablets market size is expected to reach \$ 1003 million by 2032, rising at a market growth of 11.0% CAGR during the forecast period (2026-2032).

Ibrexafungerp Citrate is a novel triterpenoid antifungal agent that exerts fungicidal effects by inhibiting the synthesis of  $\beta$ -1,3-glucan in fungal cell walls. It demonstrates potent activity against a variety of pathogenic fungi including *Candida* species. Administered as an oral tablet in its citrate salt form, it is mainly indicated for the treatment of vulvovaginal candidiasis and can also be used for the prophylaxis and management of invasive fungal infections. With favorable oral absorption, broad antifungal spectrum and good safety profile, it represents a valuable new option for clinical antifungal therapy.

In 2025, global ibrexafungerp citrate production reached approximately 2.1–2.3 million bottles

As the first-in-class oral triterpenoid antifungal drug worldwide, ibrexafungerp citrate holds an important innovative position in the global antifungal market due to its unique mechanism of action, broad-spectrum antifungal activity and favorable safety profile. It is mainly indicated for the treatment and prevention of vulvovaginal candidiasis and recurrent infections, while expanding its indications to areas such as invasive fungal infections. Its market growth is driven by rising global incidence of fungal diseases, increasing drug-resistant strains and limitations of existing therapies. With its differentiated advantages, it complements traditional azoles and echinocandins, showing growth potential in both gynecological anti-infective and systemic antifungal segments. Global commercialization is carried out through collaboration between

innovator companies and regional partners. The approval and launch in emerging markets including China has further unlocked incremental space. Despite challenges such as pricing, insurance coverage and market education, the market continues to expand steadily with patent protection, expanded indications and improved clinical recognition, supporting continuous enhancement of long-term market value and competitiveness.
