Abstracts

According to our (Global Info Research) latest study, the global IC Test Probes market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

IC Test probes are used to test integrated circuits (ICs). They differ in terms of contact type or pin type. Low profile pins are standard, low-height, printed circuit board (PCB) pins. Solder tail pins are designed to allow for easy soldering, and for other specialized applications. Wire wrap pins use a solderless wrap to achieve electrical connections. Typically, a stripped or unstripped wire is connected onto a wrap post. Straight pins terminate on both sides of the socket or receptacle. Spring loaded pins are telescopic, electromechanical interconnects. They typically consist of one or more contact members (plungers) and a helical coil spring housed within a conductive tube (barrel). Other contact types for IC pin probes are also available.
