## Abstracts

Icatibant is a 10 amino acid peptidomimetic of bradykinin and a selective antagonist to the bradykinin B2 receptor. Icabant has been used for the treatment of attacks in patients with hereditary angioedema. Recent evidence has shown a link between dysregulated bradykinin-mediated inflammation and acute respiratory distress syndrome (ARDS), a common complication in COVID-19 patients. Icatibant was proposed to inhibit excessive activation of the bradykinin B2 receptor during the SARS-CoV-2 infection, reducing the risk of ARDS.
