## Abstracts

According to our (Global Info Research) latest study, the global ICD Devices market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The ICD devices(Implantable Cardioverter-Defibrillator) is a small battery-powered devices implanted in the body that detects and stops irregular heartbeats (arrhythmias). The ICD devices continuously monitors the heartbeat and, if needed, delivers an electric shock to restore a normal heart rhythm.

Traditional ICD(Implantable Cardioverter-Defibrillator) is implanted in the chest with wires that run to the heart. Implantation medical procedures require invasive procedures.S-ICD (Subcutaneous Implantable Cardioverter-Defibrillator) is a less invasive alternative to a traditional ICD. The S-ICD device is implanted under the skin at the side of the chest below the armpit. It connects it to a sensor that runs along the breastbone.The device only needs to be implanted under the skin, and the wires do not need to go into the heart. This eliminates potentially significant short- and long-term risks associated with placing wires within the heart or blood vessels.
