The global Ice Cream Cups and Lids market size is expected to reach \$ 2221 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

Ice cream cups and lids are specialized containers designed to store and serve ice cream. Ice cream cups are typically made from materials such as paperboard, plastic, or compostable materials. Paperboard cups are often lined with a food - grade wax or plastic coating to prevent the ice cream from melting and seeping through, ensuring the cup maintains its structural integrity. Plastic cups offer durability and are commonly used for both single - serve and larger portions of ice cream. Compostable cups are becoming increasingly popular as they align with sustainable practices, reducing environmental impact.

In 2025, global Ice Cream Cups and Lids production reached approximately 14,127 million units, with an average global market price of around US\$ 0.11 per unit.

The supply chain of ice cream cups and lids starts with upstream raw material suppliers that provide core inputs including food-grade paper pulp, plastic resins, barrier coating materials, food-safe inks and additives. Midstream manufacturers complete forming, die-cutting, printing, curling and quality inspection to produce finished cup and lid sets. Downstream, products are distributed to ice cream brands, dessert shops, supermarkets, catering providers and food truck operators via packaging distributors, reaching end consumers in dine-in, takeaway and retail scenarios.

Raw material expenditure is the largest cost component, accounting for 55% to 65% of total production cost, as pulp, plastic resin and functional coating prices directly drive overall cost levels. Manufacturing conversion costs make up 20% to 25% of total cost,

covering equipment depreciation for molding processes, energy consumption, and direct labor for production and quality control. Printing, packaging and food safety testing costs account for 8% to 12%, and the remaining 7% to 10% covers logistics, administrative overhead and R&D for material and structural innovation.
