Abstracts

The global Ice Cream Machine market size is expected to reach \$ 1375 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

An ice cream machine is a machine used to make quantities of ice cream for consumption. Ice cream machine may prepare the mixture by employing the hand-cranking method or by employing an electric motor. The resulting preparation is often chilled through either pre-cooling the machine or by employing a machine that freezes the mixture.

An ice cream machine has to simultaneously freeze the mixture while churning it so as to aerate the mixture and avoid ice crystals. As a result, most ice creams are ready to consume immediately. However, those containing alcohol must often be chilled further to attain a firm consistency. Some machines, such as certain lower-priced countertop models, do require that the resulting mixture be frozen for additional time after churning is complete.

The major players in global Ice Cream Machine market include Taylor, Carpigiani, Nissei, etc. The top 3 players occupy about 70% shares of the global market. Asia-Pacific and North America are main markets, they occupy about 60% of the global market. Soft Ice Cream Machine is the main type, with a share about 70%. Catering Industry is the main application, which holds a share about 70%.
