## Abstracts

The global Ice Mold with Storage Container market size is expected to reach \$ 1253 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, the global production of ice mold with storage container is estimated to be approximately 47 million units, with an average selling price of about \$18 per unit and a gross profit margin of approximately 35%. The annual production capacity of a single line is about 300,000 units. Ice molds with storage container are integrated ice-making and ice-storage containers. They combine a traditional ice tray (ice-making part) with a sealed or semi-sealed storage box (ice-storage part), aiming to solve the inconvenience of transferring ice after making ice with traditional ice trays, providing a more hygienic and convenient ice-making and ice-retrieval experience. The upstream of ice tray manufacturers primarily comes from the petrochemical industry, which provides food-grade plastic raw materials such as PP, PS, and silicone. The midstream involves manufacturing, using processes such as injection molding and assembly. Downstream, they reach consumers through online e-commerce, offline home furnishing stores, and supermarkets. The core demand for the product stems from the pursuit of convenience in ice making and storage in daily family life. Its 'integrated' design solves the pain points of traditional ice cube trays being easily contaminated and inconvenient to use. The main driving force comes from the general demand of people to improve the experience of life details and the efficiency of kitchen space utilization in the context of consumption upgrading.

The growth of the market with ice mold with storage container is mainly driven by three core factors: 1. The upgrading of the global small household appliances and kitchen products market has stimulated consumers' demand for innovative products that are

multi-functional, space-saving, and enhance usage convenience; 2. The increasing trend of home self-cooling beverages, cocktails, and refined lifestyles has led to the demand for integrated solutions that can both efficiently make ice and neatly store ice; 3. The requirements for efficient storage and hygienic tidiness in modern urban living spaces (especially compact kitchens) have made designs with closed storage functions a key selling point, effectively solving the problems of easily spilled and mixed ice grains, off-flavors, and contamination in traditional ice compartments.

This report studies the global Ice Mold with Storage Container production, demand, key manufacturers, and key regions.
