Abstracts

Ice protection systems are designed to keep atmospheric ice from accumulating on aircraft surfaces (particularly leading edges), such as wings, propellers, rotor blades, engine intakes, and environmental control intakes. If ice is allowed to build up to a significant thickness it can change the shape of airfoils and flight control surfaces, degrading the performance, control or handling characteristics of the aircraft. An ice protection system either prevents formation of ice, or enables the aircraft to shed the ice before it can grow to a dangerous thickness.

Scope of the Report:

This report focuses on the Ice Protection Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The ice protection systems market in Europe is expected to witness the highest growth during the forecast period, as countries in Europe have been increasing their commercial fleet size due to increased air travel and passenger traffic and defense spending to strengthen their battle operational capacity. This is expected to consequently lead to increased demand of ice protection systems in the region.

The worldwide market for Ice Protection Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
