According to our (Global Info Research) latest study, the global Ice Rescue Suit market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

One of the main concerns in the development of ice rescue suits is to improve heat insulation to provide better protection against extremely cold temperatures. Manufacturers are using advanced materials and technologies to enhance the thermal performance of protective clothing, ensuring that rescue workers remain warm and comfortable in freezing conditions. Another trend in ice rescue suits is increased buoyancy. This is especially important in situations where rescuers may need to float or swim in icy waters.
