The global ICP-OES Nebulizers market size is expected to reach \$ 38 million by 2029, rising at a market growth of 5.6% CAGR during the forecast period (2023-2029).

Inductively Coupled Plasma Optical Emission Spectroscopy (ICP-OES) is an analytical technique used for elemental analysis. In ICP-OES, a sample is atomized and ionized in a plasma, and the resulting emission of light is measured at various wavelengths to determine the elemental composition of the sample. A nebulizer is a key component of an ICP-OES system, as it is responsible for generating a fine mist of the sample solution that can be efficiently introduced into the plasma.
