## Abstracts

According to our (Global Info Research) latest study, the global ICP RIE Etching Systems market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Inductively Coupled Plasma RIE (ICP-RIE) is an etch technology often used in specialty semiconductor markets for device manufacturing. This technology can combine both chemical reactions and ion-induced etching. The independent control of ion flux enables high process flexibility. ICP etching sources produce a high density of reactive species at low pressure. Substrate DC bias is independently controlled by an RF generator, allowing control of ion energy according to process requirements.
