Abstracts

The global ICS Security Solution market size is expected to reach \$ 2012 million by 2032, rising at a market growth of 7.7% CAGR during the forecast period (2026-2032).

To address the core challenges faced by industrial control systems (ICS) in the process of digitalization and networking, such as high protocol vulnerability, broken network isolation, physical consequences of attacks, and incompatibility of traditional IT security methods, ICS security solutions have emerged. Since the early 21st century, marked by targeted attacks such as the Stuxnet incident, the industrial security field has undergone a conceptual revolution and technological evolution from physical isolation to proactive defense. Currently, ICS security solutions have developed into a comprehensive protection system integrating industrial firewalls, industrial monitoring and auditing (IDS/IPS), industrial control security management platforms, industrial threat intelligence, and security services. Widely applied in critical national infrastructure sectors such as power, oil and gas, manufacturing, and transportation, these solutions effectively ensure the continuity, stability, and security of production processes, serving as a foundational professional solution for the smooth progress of industrial digital transformation.

ICS security solutions will integrate threat intelligence, vulnerability remediation, and emergency response functions to achieve automated 'prediction-defense-response-recovery' throughout the entire process. In the 5G + industrial internet scenario, security needs are shifting from single-point protection to collaborative defense in cyberspace and physical space. Digital twin security testing platforms can simulate attack paths in advance, reducing risks in real networks. At the policy level, it is necessary to improve cross-industry security standards, establish an industrial vulnerability sharing alliance, and promote the full replacement of foreign cryptographic algorithms with domestic

ones in critical areas.
