## Abstracts

According to our (Global Info Research) latest study, the global ICT and FCT Test Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

ICT and FCT test equipments are equipments used for testing in electronics manufacturing. The ICT test equipment is used to perform in-circuit testing, mainly to detect faults or wrong connections on circuit boards. It contacts the test points on the circuit board through the pin or bed of needles to perform signal test, continuity test and component parameter test to determine whether the function and soldering in the circuit board are correct. The ICT test equipment usually includes test machine tools, test fixtures and control software. The FCT test equipment is used for functional testing, mainly to verify the functional performance of electronic products in the actual use environment. It conducts a comprehensive functional test of the product by simulating real workloads and input signals to confirm whether the product meets the specification requirements. The FCT test equipment usually includes test instruments, test software and test fixtures.

ICT and FCT test equipments play the important role in the electronics manufacturing industry, which can improve product quality and reliability, while reducing the failure rate and defective product rate in production. In actual application, according to the characteristics of the product and the test requirements, you can choose the appropriate test equipment, and carry out the corresponding test program development and parameter settings to ensure efficient and accurate testing.
