## Abstracts

According to our (Global Info Research) latest study, the global ID Clamp market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

An ID clamp is a cutting jig. After centering a workpiece with a hole for location, the clamping jig secures the workpiece from the inside by the wall of the hole. The mouth part of the clamp is divided into several parts, which are spread by the clamping operation to fix the ID clamp on the inside diameter of the workpiece. By clamping the workpiece only from the inside, interference between the clamping jig and the machining tool is avoided, making it suitable for clamping workpieces with many machining points, multiple-piece machining, and thin-walled parts.
