The global IC Programming and Testing System market size is expected to reach \$ 30 million by 2029, rising at a market growth of 6.2% CAGR during the forecast period (2023-2029).

In the global market, IC Programming and Testing System core players are mainly Hi-Lo Semiconductor, Shenzhen Acroview Technology, Data I/O Corp, ect. The top three players in this industry account for about 30% of the market share. North America, China, and Taiwan are the major manufacturing regions for this product, with North America accounting for about 17% of the global market share. The product can be categorised into offline and online systems based on the product type. The product is widely used in consumer electronics, automotive electronics, telecommunications and other industries.

The integrated IC programming and testing system refers to an 'integrated' device that integrates IC programming, IC appearance and link quality testing, and IC function (performance) testing. It combines two steps, that is, programming programs, data or firmware into an integrated circuit (IC), and subsequent functional testing and verification of the IC, and the testing is divided into two aspects: appearance testing and functional testing.

1) Appearance test: use CCD or AOI detection technology (2D tape-out inspection or 3D coplanarity technology) in the IC burning process to check the quality of IC pin connection (correct connection, short circuit, poor contact, etc.), product Appearance quality (such as defects, scratches, dents, etc.), mainly for the program programming and calibration of IC.

2) Performance test: The test function provides a variety of test items, including FT (function test), O/S (circuit test), LEAKAGE (current leakage test), sub-BIN and other tests. Mainly for testing the performance of the IC itself.

Generally speaking, the IC burning and testing integrated system is a kind of (1) burning + appearance test (2) burning + appearance testing + performance testing (3) burning + performance testing, which has the ability of burning + testing A composite function device in one of three cases.
