Identity and access management products offer role-based access control, which lets system administrators regulate access to systems or networks based on the roles of individual users within the enterprise.Systems used for identity and access management include single sign-on systems, multifactor authentication and access management. These technologies also provide the ability to securely store identity and profile data as well as data governance functions to ensure that only data that is necessary and relevant is shared.

These products can be deployed on premises, provided by a third party vendor via a cloud-based subscription model or deployed in a hybrid cloud.
