Abstracts

The global Identity Theft Protection Services market size is expected to reach \$ 10570 million by 2029, rising at a market growth of 6.9% CAGR during the forecast period (2023-2029).

Global key players of Identity Theft Protection Services include NortonLifeLock, Experian, Equifax, TransUnion, FICO, etc. Global top five manufacturers hold a share over 53%. North America and Europe is the two largest market of identity theft & fraud protectio. In terms of product, credit monitoring is the largest segment, with a share over 53%, followed by physical card. And in terms of application, the largest users is consumer, with a share over 89%.

Identity theft is a crime, a type of fraud in which an imposter steals individual information of another person (or a company) and uses it by pretending to be someone else in order to gain some benefit (e.g. money or goods). An identity theft can cause a victim both a financial and emotional damage and also a waste of time and energy needed to avoid consequences of the fraud.

The identity theft can also affect companies, causing not only economic but also reputational damages (e.g. the imposter offers lower quality services compared to the ones offered by the original company). Moreover, the companies are supposed to protect beyond themselves, also their employees, clients and suppliers, and so they are responsible to damages caused to the third parties in a case of bad handling of their sensible data. Depending on a different country the fine for not proper handling such data could be very high. Therefore, in order to prevent that risk, the most important practices are the training of the employees about the risks and manners in which identity theft can be performed, and the countermeasures to adopt. Also it is advisable

to have a good information system provided with adequate security and constantly updated.

Identities are more valuable than ever. Identity theft protection helps protect potential victims of identity theft. Companies typically offer four different services: credit monitoring, expert support, insurance, and information surveillance via internet and public sources. Through these, companies are can detect identity theft, and mitigate the damage thereof.
