## Abstracts

According to our (Global Info Research) latest study, the global Identity Threat Detection and Response (ITDR) Software market size was valued at US\$ 462 million in 2025 and is forecast to a readjusted size of US\$ 659 million by 2032 with a CAGR of 5.2% during review period.

Identity Threat Detection and Response (ITDR) software detects identity-related threats and vulnerabilities such as credential misuse and abuse, unapproved authorization and privilege escalation, and other identity-related threats. Information security teams use this software as part of their threat detection program, specifically targeting identity-related attack surfaces. Identity Threat Detection and Response (ITDR) software differs from Identity and Access Management (IAM) software; IAM functions to prevent identity-related risks by providing proper user authentication and access upfront, while ITDR works after a system has been compromised. Identify threats. ITDR also differs from Insider Threat Management (ITM) software in that ITDR identifies credential and privilege abuse, often from external parties who have identified and abused identity vulnerabilities, whereas ITM monitors actions taken by threat actors, such as downloading content they do not have permission to access The data.

The Identity Threat Detection and Response (ITDR) software market is currently experiencing rapid growth. This growth is driven by increasing emphasis on Identity and Access Management (IAM) risks, the need for multi-factor authentication and zero-trust architectures in cloud environments, and the pursuit of unified observability and incident response capabilities across on-premises, cloud, and collaboration tools. Core capabilities focus on detecting abnormal identity behavior, rapidly locating credential leaks and abuse, session monitoring, and automated forensics and response processes

to reduce false alarms and improve handling efficiency. The market landscape features both large security vendors and identity vendors, while startups continue to focus on specific scenarios (such as zero trust, DevSecOps integration, and compliance auditing). User focus is on scalability, cross-domain integration, end-to-end automated response, and compliance support that minimizes privacy and data usage.
