The global IG Mixed Gas Fire Extinguishing System market size is expected to reach \$ 794.3 million by 2029, rising at a market growth of 3.1% CAGR during the forecast period (2023-2029).

An IG (Inert Gas) mixed gas fire extinguishing system is a type of fire suppression system that utilizes a blend of inert gases to control or extinguish fires. Inert gases, such as nitrogen, argon, and carbon dioxide, are used because they do not react chemically with the fire. Instead, they work by reducing the oxygen concentration within the protected space to a level that is insufficient to support combustion, effectively suppressing the fire.
