Abstracts

According to our (Global Info Research) latest study, the global IGBT Hydrogen Production Power Supply market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The IGBT hydrogen production power supply is a high-frequency switch mode DC power supply using PWM technology. It is used in the hydrogen production electrolyzer and is the core equipment connecting the electrolyzer to various power grids. Its main structure includes rectifier cabinets, transformers, control and cooling systems, etc.

Green Hydrogen is produced by using renewable energy (e.g. solar and wind) for transportation and storing energy but also to support the decarbonization of heavy industry processes or fuel green mobility fleets. The electrolysis process requires a very specific electrical power supply, which is scalable, modular and fully grid-compliant. The production of green hydrogen needs a reliable DC power supply with good power factor for high efficiency especially at partial load operation to reduce the overall cost of operations of such processes as electrolysis.

The Global Info Research report includes an overview of the development of the IGBT Hydrogen Production Power Supply industry chain, the market status of Alkaline Electrolyzer (
