Abstracts

According to our (Global Info Research) latest study, the global IGBT-IPM Module market size was valued at US\$ 2332 million in 2025 and is forecast to a readjusted size of US\$ 3621 million by 2032 with a CAGR of 5.9% during review period.

IGBT-IPM is essentially a smart power module built around IGBTs and anti-parallel diodes as the main switching devices, with gate drive, undervoltage protection, overcurrent/short-circuit protection, temperature monitoring, and fault output integrated into one package for three-phase inverter and motor-drive systems. In product terms, the global IGBT-IPM market has developed a clear hierarchy: compact module families such as Mini/Small DIIPM, CIPOS Mini, and SLLIMM mainly serve white goods and low-to-mid-power motor drives, while Large DIIPM, DIIPM+, CIPOS Maxi, and SLLIMM High Power address commercial air conditioning, servos, general-purpose inverters, and higher-power industrial applications. End-use applications are concentrated in air conditioners, refrigerators, washing machines, dishwashers, fans, pumps, air purifiers, HVAC, general industrial drives, servos, and selected automotive auxiliary e-drive systems. In value-chain terms, upstream consists mainly of silicon IGBT dies, driver ICs, and packaging materials; midstream consists of design, manufacturing, packaging, testing, and application support by IDMs and module suppliers; downstream is led by appliance, industrial-control, and automotive system manufacturers.

IGBT-IPM remains the unquestioned backbone of the global IPM market. According to the dataset you provided, the IGBT-IPM revenue share declines from 93.25% in 2021 to 85.82% in 2032, but it still remains far above MOSFET-IPM, SiC-IPM, and GaN-IPM, confirming that IGBT-based intelligent modules continue to dominate high-volume

applications such as home appliances, HVAC, and low-/medium-voltage industrial drives because of their cost competitiveness, process maturity, supply-chain depth, and long-proven reliability. Competitive dynamics are also evolving: global incumbents such as Mitsubishi Electric, Infineon, STMicroelectronics, onsemi, Fuji Electric, and ROHM still control the broadest platform portfolios and the strongest brand positions, but the market-share trend in your dataset shows that Chinese suppliers are scaling rapidly, especially in appliance and industrial IGBT-IPM, with companies such as Silan Micro and China Resources Microelectronics gaining visible ground. Regionally, the manufacturing center of gravity is also shifting sharply toward China, while Japan continues to retain strong technological and product-platform influence.

Looking ahead, the global IGBT-IPM industry is likely to follow a development path defined by continued expansion in mature mass-market applications, performance upgrades within established silicon platforms, and gradual pressure from wide-bandgap alternatives. On one side, regulatory pressure on motors and variable-speed drives remains supportive: the EU has established ecodesign requirements for electric motors and variable speed drives, and onsemi explicitly highlights IPMs as critical devices for inverter compressors and fans in heat-pump systems. On the other side, industrial automation continues to provide a durable demand base: IFR reports 542,076 industrial robots were installed globally in 2024, while the IEA reports that global electric-car sales exceeded 17 million in 2024, broadening demand for intelligent power modules in compressors, pumps, fans, onboard charging peripherals, and thermal-management systems. At the same time, SiC-IPM and GaN-IPM are beginning to penetrate higher-efficiency and higher-power-density applications, but under current industry conditions IGBT-IPM is still expected to remain the mainstream solution for a long period in 600/650 V and 1200 V classes—especially in home appliances, commercial HVAC, and general-purpose industrial inverter systems—because of its superior cost/performance balance and the completeness of its ecosystem.
