## Abstracts

IGBT is short for Insulated Gate Bipolar Transistor. It is a power transistor with a MOS structure for an input part and a bipolar one for an output part. Suitable for high voltage and high current, it is capable of controlling high power with less drive power.

Scope of the Report:

This report focuses on the IGBT in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Insulated gate bipolar transistor (IGBT) is a semiconductor power device that is used to control electrical energy. It provides a stable supply of electricity by reducing the congestion in power supply, leading to optimized power utilization. IGBT module is the foremost device, which is widely used in industries. Currently, rise in demand for higher efficiency, faster switching, and minimal power loss are some of the key driving factors of the market.

Despite the presence of competition problems, due to the Southeast Asia and Oceania recovery trend is clear, investors are still optimistic about this area, the future will still have more new investment enter the field. Even so, the market is intensely competitive. The study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.

The worldwide market for IGBT is expected to grow at a CAGR of roughly 6.4% over the next five years, will reach 140 million US\$ in 2023, from 100 million US\$ in 2017, according to a new GIR (Global Info Research) study.
