Abstracts

The global Ignition Coil Driver Power IC market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ignition Coil Driver Power IC is a channel driver, plus an IGBT power stage internally assembled using Chip On Chip (COC) hybrid technology. The two chips are assembled together. The device comes with several built-in protections like a coil current limiter, thermal monitoring circuit, which triggers a Soft Shut Down (SSD) as soon as the maximum allowable temperature is reached (TSD). It avoids extra voltage on the secondary side of the coil transformer. The Slow Turn On circuit (STO), avoids unwanted sparks during first negative dV/dt of HVC voltage at turn on. The current flag circuit provides an output logical signal voltage when the coil current reaches a fixed threshold.

This report studies the global Ignition Coil Driver Power IC production, demand, key manufacturers, and key regions.
