According to our (Global Info Research) latest study, the global IGY Polyclonal Antibodies market size was valued at USD 7 million in 2023 and is forecast to a readjusted size of USD 15 million by 2030 with a CAGR of 10.6% during review period.

Immunoglobulin Y (abbreviated as IgY) is a type of immunoglobulin which is the major antibody in bird, reptile, and lungfish blood. It is also found in high concentrations in chicken egg yolk. As with the other immunoglobulins, IgY is a class of proteins which are formed by the immune system in reaction to certain foreign substances, and specifically recognize them.

IgY antibodies have a different structure from IgG, particularly in the Fc and hinge regions. The affinity maturation process of IgY is also different from IgG. These biological features underlie IgY's competitive advantages over IgG. Shown in the four panels are several comparisons between IgY and IgG.

IgY is a hen egg polyclonal antibody. Hen eggs contain more than 450 separate antibodies and when consumed, are not rejected by the human immune system.

The scientific community has long known that IgY has the proven ability to modulate immune systems. The G.I. tract is the typical entry point for foreign pathogens. By removing pathogens IgY can alleviate stress on the overall system thereby optimizing the body's natural defense systems. When consumed orally or topically, IgY can identify and attack foreign pathogens that enter via the gut. Antibodies work on both viral and bacterial infections possibly reducing the need for antibiotics.

IgY antibodies have been studied extensively by many government, university and private industry research groups over the years, all concluding the efficacy of IgY in improving overall health. IgY has been used safely in nutraceuticals and vitamins for many years.

The classification of IGY Polyclonal Antibodies includes Primary Antibody and Secondary Antibody. The proportion of Primary Antibody is about 70%, and the proportion of Secondary Antibody is about 30%.

IGY Polyclonal Antibodies are application in Academic Research and Commercial. The most of IGY Polyclonal Antibodies is used in Commercial, and the market share of that is about 60%.

North America is the largest consumption place, with a consumption market share nearly 37%, Europe is the second largest consumption place with the consumption market share of 30%.

Market competition is not intense. Merck, IGY Life Sciences, Abcam, Genway Biotech, Good Biotech etc. are the leaders of the industry with the market share are about 66%.
