Abstracts

IHC (Immunohistochemistry) and ISH (In situ hybridization) are histopathology diagnostic techniques based on intracellular interactions. IHC and ISH techniques have myriad of applications like disease diagnosis, drug development, karyotyping and others. ISH and IHC techniques have become integral part of the diagnostic histopathology however performing these techniques in the laboratory requires time and possibility for occurrence of errors remains which in turn hamper the results. The staining process involved in these techniques need precision and are time consuming therefore the requirement of automated systems for IHC and ISH slide staining is the need of the hour. The IHC and ISH slide staining systems are devices capable of automated staining with increased efficiency, high speed and enhances the quality and thus increases productivity of the tests.
