Abstracts

The global Illuminated Windsock market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Illuminated windsock is a specialized device used to indicate wind direction and speed at airports, helipads, and other aviation facilities. It consists of a fabric sock, typically made of nylon or PVC, which is attached to a pole or mast. The windsock is illuminated from within using LED lights, allowing it to be easily visible day and night. The color and positioning of the lights on the windsock provide information about wind direction and speed to pilots, enabling them to make informed decisions during takeoff, landing, and taxiing operations.
