Abstracts

The global Image-Based Code Readers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The driving factors for the development of image-based code readers mainly include the following points:

Technological progress: With the continuous development of image processing technology and computer vision technology, image-based code readers have been continuously optimized and improved in terms of algorithms and hardware. Advances in high-resolution cameras, image processing chips and intelligent algorithms have provided technical support for the development of image-based code readers.

Application requirements: In various fields such as manufacturing, logistics and distribution, and medical care, the demand for reading barcodes and QR codes is increasing, requiring code readers to be efficient, accurate, and durable. Image-based code readers can adapt to various complex scenes and environments, so they have been widely used in terms of application requirements.

Cost reduction: The cost of image-based code readers is gradually decreasing, and more and more enterprises and institutions can afford their purchase and maintenance costs. This also promotes the popularity and application of image-based code readers.

Improved security: With the increase in awareness of network security and privacy protection, higher requirements have been placed on the security and reliability of barcodes and QR codes. Image-based code readers need to go through a strict encryption and decryption process when reading barcodes and QR codes, ensuring

data security and privacy.
