The global Image Guide Surgical Navigation System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The major consumer markets for Image Guide Surgical Navigation Systems are North America and Asia. With the gradual recovery of the global economy after the COVID-19 outbreak and the return of major economies to normal, the medical industry will see certain growth. More and more hospitals and clinics have the capacity to perform surgical procedures. As a result, the demand for Image Guide Surgical Navigation Systems will increase in the foreseeable future.

The Image Guided Surgical Navigation System is a medical device that uses imaging technology, such as X-rays, magnetic resonance imaging (MRI), computed tomography (CT) scans or ultrasound, to guide surgeons during procedures. The system creates a 3D map of the patient's anatomy, which is then used to guide surgical instruments and implants with greater accuracy. This can improve the precision and safety of surgical procedures, reduce operative time, and minimize complications. These systems are commonly used in orthopedic, neurosurgical, and ENT surgeries.
