## Abstracts

According to our (Global Info Research) latest study, the global Image Inspection Software market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Visual checks usually perform visual inspections of products and materials by workers. Compared to normal products and components, visual inspection checks for differences in shape and color, scratches and dents, and foreign matter. In addition to skill and experience, sustained concentration is essential for this work. Lack of attention can lead to oversights, which can lead to defective products being shipped, which can lead to complaints from users.

To avoid such a situation, Image inspection software uses image recognition and comparison technology to store everyday products and components in computer memory and use them as a reference to automatically check the inspected items and sort them into good and defective ones.
