Abstracts

The global Image Inspection Software market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Visual checks usually perform visual inspections of products and materials by workers. Compared to normal products and components, visual inspection checks for differences in shape and color, scratches and dents, and foreign matter. In addition to skill and experience, sustained concentration is essential for this work. Lack of attention can lead to oversights, which can lead to defective products being shipped, which can lead to complaints from users.

To avoid such a situation, Image inspection software uses image recognition and comparison technology to store everyday products and components in computer memory and use them as a reference to automatically check the inspected items and sort them into good and defective ones.

This report studies the global Image Inspection Software demand, key companies, and key regions.
