Abstracts

The global Image Sensors market size is expected to reach \$ 23760 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

An image sensor or imaging sensor is a sensor that detects and conveys the information that constitutes an image. It does so by converting the variable attenuation of light waves (as they pass through or reflect off objects) into signals, small bursts of current that convey the information. The waves can be light or other electromagnetic radiation. Image sensors are used in electronic imaging devices of both analog and digital types, which include digital cameras, camera modules, medical imaging equipment, night vision equipment such as thermal imaging devices, radar, sonar, and others. As technology changes, digital imaging tends to replace analog imaging.

Some of the key players in the global image sensors industry are Sony Semiconductors, Samsung Semiconductor, OmniVision and ON Semiconductor, with about 70% market shares.

This report studies the global Image Sensors production, demand, key manufacturers, and key regions.
