Abstracts

The global Imaging Color Photometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An imaging color photometer is an instrument used to measure the brightness and color performance of display devices such as monitors, TVs, projectors, etc. It can scan the entire display screen through the imaging sensor, obtain the brightness and color information of each pixel, and generate brightness and color distribution images. Imaging color photometers usually consist of hardware devices and related software systems. Hardware devices include imaging sensors, optical systems and control circuits, etc., used to collect image data from the display screen. The software system is responsible for processing and analyzing the collected image data, calculating parameters such as brightness, color temperature, and color gamut, and generating corresponding test reports. The imaging color luminance meter has the following characteristics and advantages: 1. Non-contact measurement: The display screen is scanned over a long distance through the imaging sensor without direct contact with the object to be measured, thus avoiding damage and impact on the display screen. 2. High-precision measurement: The imaging color luminance meter uses a high-precision imaging sensor and measurement algorithm to accurately measure the brightness and color performance of the display screen. 3. Fast measurement: The imaging color luminance meter can quickly obtain the brightness and color distribution image of the display screen, improving measurement efficiency. 4. Comprehensive evaluation: The imaging color photometer can conduct a comprehensive evaluation of the entire display, including brightness uniformity, color accuracy, color saturation and other aspects of performance. 5. Visual display: By generating brightness and color distribution images, the brightness and color performance of the display can be intuitively displayed, making it easier for users to analyze and judge.
