According to our (Global Info Research) latest study, the global Imaging Energy Filter (IEF) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Imaging Energy Filter (IEF) provides fast imaging capability and energy filtering. A uniquely designed optical system accurately filters the complete PEEM image across the entire detector area, separating the unfiltered image into individual distributions of different energies. Each distribution can be attributed to a specific work function, i.e. a specific chemical phase of the sample. Filtering of the full image and fast acquisition are unique features of the observation time-dependent system.
