Abstracts

A prism is a polyhedron solid that has two parallel bases and at least three sides, or faces. Many prisms have three long faces in between two triangle-shaped ends. However, prisms can be made in many forms and shapes. In optics, the scientific study of visible light, a prism made of glass or other transparent material can be used both to refract (bend) light and to reflect it. Imaging Prisms are used in many optical viewing instruments, including binoculars, microscopes, and periscopes.
