## Abstracts

According to our (Global Info Research) latest study, the global Imaging Radar market size was valued at USD 1047.5 million in 2023 and is forecast to a readjusted size of USD 1578 million by 2030 with a CAGR of 6.0% during review period.

Imaging radar is a subset of radar. Its name comes from its high angular resolution, which can provide clear images. Angular resolution is the ability to distinguish objects within the same range of distance and relative velocity, and recognize static objects at high resolution. Imaging radar is considered to be a comprehensive cost performance advantage that will have more cost and performance than other sensors. In some cases, imaging radar may identify objects on the road, such as bicycles, people or small obstacles. At the same time, it has the traditional advantages of dealing with bad weather conditions, which, at least so far, camera, ultrasonic and lidar can't do.

Global Imaging Radar key players include Continental, ZF Friedrichshafen, Veoneer, etc. Global top three manufacturers hold a share over 65%.

North America is the largest market, with a share about 37%, followed by Europe and China, both have a share about 35 percent.

In terms of product, Millimeter-Wave Imaging Radar is the largest segment, with a share over 95%. And in terms of application, the largest application is 2D Imaging, followed by 3D Imaging.

The Global Info Research report includes an overview of the development of the Imaging Radar industry chain, the market status of 2D Imaging (Millimeter-Wave Imaging Radar, Laser Imaging Radar), 3D Imaging (Millimeter-Wave Imaging Radar,

Laser Imaging Radar), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Imaging Radar.

Regionally, the report analyzes the Imaging Radar markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness.
