Immersion Coil is a heat exchange device that is directly immersed in a liquid and is used to heat or cool a liquid. It is usually made of metal or fluoropolymer and has efficient heat transfer properties and good chemical compatibility. Submersible coils are widely used in the chemical, food, pharmaceutical and metal processing industries to heat or cool liquids, especially where precise temperature control is required. The design can be serpentine, U-shaped or spiral-shaped to suit different tank configurations and heat exchange needs.
