According to our (Global Info Research) latest study, the global Immersion Liquid Cooled Optical Module market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Immersion liquid cooled optical module refers to an optical module that utilizes a liquid cooling system to dissipate heat generated during its operation. The optical module is immersed in a non-conductive coolant fluid, which absorbs the heat generated by the module, and transfers it to a radiator or heat exchanger for dissipation. This cooling method enables efficient heat removal, allowing the optical module to operate at higher power levels, higher data rates, and longer distances without the risk of overheating.

Immersion liquid cooled optical modules are commonly used in high-performance computing, data center, and telecommunication applications. They offer several advantages over traditional air-cooled optical modules, including higher reliability, lower noise, and more efficient cooling.
