The global Immersion Liquid Cooling Energy Storage System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Immersion Liquid Cooling Energy Storage System is a type of energy storage technology that uses a liquid cooling system to store and release energy. It involves immersing the energy storage medium, such as batteries or thermal storage materials, in a liquid coolant to regulate and maintain the temperature of the system. The immersion liquid cooling system helps in dissipating the heat generated during the charging and discharging process of the energy storage system. By keeping the temperature under control, it improves the efficiency and lifespan of the storage medium.
