According to our (Global Info Research) latest study, the global IC Carrier Tapes market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

IC Carrier Tapes are special plastic tapes used to package and transport integrated circuits. This strip of material has multiple slots and loading locations to accommodate a single IC chip, with each slot typically including a location and locating point for the IC. IC carrier tapes are designed to ensure safe and efficient storage and transportation of IC chips to prevent physical damage, electrostatic discharge and contamination such as dust. This tape packaging is generally compatible with automated production lines and can be used by SMT (surface mount technology) and other electronic manufacturing processes, thereby improving production efficiency and quality control.

IC Carrier Tapes are usually labeled with information about the IC chip, such as model number, production date, and batch number to allow tracking and management of the chip's life cycle. This form of packaging is critical to electronic component manufacturing because it provides a convenient and reliable method to handle and deliver IC chips.
