Abstracts

Immersive simulator-based emergency services help in improving safety in industrial performance by preventing catastrophes, reducing maintenance costs, and decreasing the release of waste material in the environment, thereby increasing the production throughout. As emergency situations such as oil spills, fire breakout, or any other disaster can occur in a process plant, field operating training is provided to plant operators to prevent or address such situations. The use of immersive simulators for training helps operators to make better decisions in emergency scenarios, ensures more stability, and lowers the risk of accidents and hazardous impact on the environment.

Scope of the Report:

This report focuses on the Immersive Simulator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
