Abstracts

According to our (Global Info Research) latest study, the global Immobilized Trypsin market size was valued at USD 10 million in 2023 and is forecast to a readjusted size of USD 15 million by 2030 with a CAGR of 5.4% during review period.

Immobilized Trypsin provides a fast and convenient method for digesting a range of concentrations of purified protein or complex protein mixtures. Digested peptides are easily separated from the Immobilized Trypsin as they flow through the spin column into the collection tube. Immobilized Trypsin is easily removed from the peptide solution because the trypsin does not pass through the column frit. Trypsin is a proteolytic enzyme, which cleaves at the carboxyl side of positively charged Lysine (Lys) and Arginine (Arg). When these amino acids are followed by the nonpolar Proline (Pro), the digestion of the site is not efficient. When Lys and Arg are followed by acids [Aspartic Acid (Asp) and Glutamic Acid (Glu)] the digestion is also not as efficient.

North American is the largest consumption place, with a consumption market share nearly 45% in 2019. Following North American, Europe is the second with the market share of 28.39%.
