According to our (Global Info Research) latest study, the global Immunoassay market size was valued at USD 18780 million in 2023 and is forecast to a readjusted size of USD 25890 million by 2030 with a CAGR of 4.7% during review period.

An immunoassay is a biochemical test that measures the presence or concentration of a macromolecule or a small molecule in a solution through the use of an antibody (usually) or an antigen (sometimes). The molecule detected by the immunoassay is often referred to as an 'analyte' and is in many cases a protein, although it may be other kinds of molecules, of different size and types, as long as the proper antibodies that have the adequate properties for the assay are developed. Analytes in biological liquids such as serum or urine are frequently measured using immunoassays for medical and research purposes.

The ELISA segment accounted for the largest share of the immunoassays market in 2017. The large share of this segment can primarily be attributed to the increasing use of immunoassay tests in cancer, infectious diseases, and therapeutic drug level monitoring.
