Abstracts

According to our (Global Info Research) latest study, the global Immunoglobulin Products market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Immunoglobulin's also called as antibodies are large Y-shaped protein produced by B-cell. These are the glycoprotein molecule produced by plasma cells in response to entry of foreign entity such as bacteria and viruses in the body. Production of antibodies is an important function of immune system. Antibodies use binding mechanism for neutralizing the activity of a foreign particle called as an antigen. These are made up of basic structural unit's namely heavy chains and light chains. In mammals five different types of antibodies (IgA, IgD, IgE, IgG and IgM) are present which perform different role in response to the type of foreign antibody encountered. Occurrences of situations where people are born with low or no level of immunoglobulin, or with an immune system that does not function properly are very common. In such condition fighting with germs and other infections become extremely difficult. Therefore, immunoglobulin therapy plays an important role for compensating the insufficient quantity of immunoglobulin in the body.

The recent approval of immunoglobulins to treat neuroimmunological disorders is a noteworthy factor that will impel the prospects for market growth until the end of the forecast period. Recently, immunoglobulin products were approved for the treatment of neuroimmunological disorders like multifocal motor neuropathy, Alzheimer's disease, and Guillain-Barré syndrome. Due to its widespread applicability, immunoglobulin products that are utilized for the treatment of neuroimmunological disorders are anticipated to contribute the largest proportion of revenue to the global immunoglobulin

products market in the next few years. Immunoglobulin products used for the treatment of primary immunodeficiency disease (PID) and neuroimmunological disorders account for around 80% of the total market revenue.
